

DDT 222: Advanced Architectural Drafting

This third course in architectural design and drafting continues with advanced architectural plans, including a slant toward light commercial construction. Topics include climate control plans, application of building codes, building materials and finish specifications, cost estimating, and bid specifications. Upon completion, students should be able to apply current techniques in producing advanced-level architectural plans, including residential and light commercial applications.

Credits: 3

Lab Hours: 2

Lecture Hours: 1

Program: Design Engineering Technology
